

BROADCAST OF MOVIES BY RADIO HERE JULY 2

Prof. Jenkins Announces the
Bginning of Regular Pro-
gram in Capital.

TESTS PROVE A SUCCESS

A program of motion pictures will be broadcast from the Jenkins' Laboratory, 1519 Connecticut avenue north-west, July 2 at 8 o'clock, it was announced yesterday. The program will last an hour and will be sent through television on a wave length of 46.7 meters, which will enable amateurs in the United States and Canada to pick it up. The pictures will be broadcast at the rate of 15 a second and will contain 48 lines to the picture.

The performance will be repeated each Monday night with a different set of pictures. As the demand grows the number of performances a week will be increased to three. For a while the moving pictures will depict only simple action. Later those with plots will be used.

During the past three weeks the moving pictures to be shown July 2 have been broadcast a number of times between the laboratory and the home of Prof. C. Francis Jenkins, 5502 Sixteenth street northwest, where they were witnessed by private audiences. The reception was stated to have been entirely satisfactory.

Gens Marie Belote, 6-year-old daughter of Theodore Belote, 1613 Longfellow street, and Catherine and Constance Rounds, daughters of Lieut. Edward Rounds, engineer in the Navy Department, acted for the pictures to be shown July 2. They will be from 5 to 15 minutes long.

The amateur radio operator can equip his set with a picture receiver for \$10 or \$15, Dr. Jenkins stated. The Jenkins' laboratory, however he stated, does not manufacture or sell them. It is broadcasting the pictures only in the interest of television. Yesterday Dr. Jenkins gave an account of his work with television before the Washington Round Table luncheon held at the University Club.
